# Food API

spoonacular API

OVERVIEW   DOCS   PRICING   TERMS   APPLICATIONS   START NOW

### The only food API you'll ever need.

Our knowledge engineers spent years crafting our **complex food ontology**, which allows us to understand the relationships between ingredients, recipes, nutrition, allergens, and more.

We understand "nut free" muffins can't contain pecans (even if the recipe doesn't mention "nuts" anywhere!) and we automatically determine that a recipe with Worcestershire sauce isn't vegetarian (we're looking at you, anchovies.)
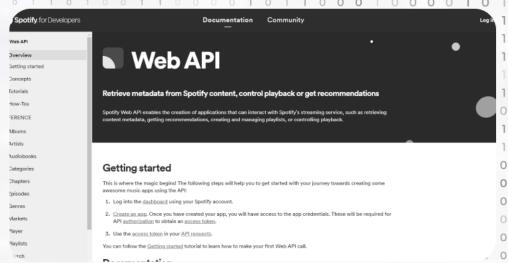

PDF Download API slides

## Web API

**Retrieve metadata from Spotify content, control playback or get recommendations**

Spotify Web API enables the creation of applications that can interact with Spotify's streaming service, such as retrieving content metadata, getting recommendations, creating and managing playlists, or controlling playback.

### Getting started

This is where the magic begins! The following steps will help you to get started with your journey towards creating some awesome music apps using the API:

1. Log into the dashboard using your Spotify account.
2. Create an app. Once you have created your app, you will have access to the app credentials. These will be required for API authorization to obtain an access token.
3. Use the access token in your API requests.

You can follow the Getting started tutorial to learn how to make your first Web API call.

https://developer.spotify.com/

spotify's web API allows you to query data about music artists, albums,and tracks, directly from the spotify data catalogue.
